...over Ireland, it will prove the warmest general election known
...for the last 50 years.—*Ibid.*
Friday, his Grace the Duke of Leinster, accompanied by
Lord Viscount Forbes, and Captain Fitzgerald, arrived at the
Donegal Arms, Belfast, on their way to Scotland, on a short-
ing party.
The Hon. F. A. Pritic, M. P. has arrived at his seat Co.
Tipperrary.
Earl O'Neil arrived in London on Friday last, from Ireland.
Sir Neil O'Donel, Bart. has arrived in London on the same
day, from his seat in the county of Mayo, on his way to the
Continent.
Lieutenant General Lord Forbes arrived in town on Satur-
day, and proceeded on Monday for his command in
Dublin.
Sir Edward O'Brien, Bart. has left his seat at Dromoland
county Clare, for London.
A commission from the Court of Prerogative in Ireland is
now holding at Cork, on the subject of the will of the late
John Symson, Esq.
The University of Edinburgh have conferred the degree of
Doctor in Medicine on the following Irish gentlemen, after
the usual public and private trials:—Robert M. Davis, Jas.
Sayles, Wm. Crofts, Michael M'Namara, Hyacinth White,
Denis Conry, George Alexander Fleury, Samuel Neill, Philip
O'Reilly John Gray, James H. Cardiff, John H. Davit,
Richard Warren, James Willett, James Moorhead, Francis
Shelton.
The success of steam boats has led to the introduction of
steam waggons:—One is now in use at the Royal Iron
Foundry, at Carlsbad, capable of drawing 50 cwt.
In the list of Subscriptions for the relief of the labouring
and manufacturing poor, advertised in the London papers,
there is one that deserves particular notice. It is that of
Two Hundred Pounds subscribed by his Royal Highness
the Duke de Berry, with an intimation to subscribe Fifty
Pounds monthly until Spring. This is, indeed, a Princely
donation, and, coming from a foreigner, its value is greatly
enhanced by the liberal sentiments which it is calculated to
inspire.—The Bank of England have also given Two Thou-
sand Pounds, and the Honourable East India Company One
Thousand Pounds.
Madame de Stael has just finished her work on France and
England, for which she asked a London Bookseller Four
Thousand Pounds. Such is the increased value of modern
publications from a pen of superior talents.
Ruben's "Women caught in Adultery" was sold lately for
Two Thousand Guineas. It is surprising how various the
prices are of the subject when handled by English artists.
We have known it sink from Ten Thousand Pounds to a
farthing!
It is said, in the literary world, that Lord Byron is resid-
ing on the lake of Geneva, and is about to send home up-
wards of one hundred additional stanzas for publication to
"Childe Harold."
Arrivals at Miltown Malbay—Major Aylmer, Mr. and Mrs.
Kelly, Mr. Mark, Miss Mark, Mr. and Mrs. Poe, Mr.
Willington, Mr. and Mrs. R. G. Maunsell, Mr. Sadlier, Mr.
and Mrs. Swiny, Mr. and Mrs. Fitzgerald, Major and Mrs.
Colpoys, Mr. Casey, Mr. and Mrs. Blair, Mrs. Fitzgerald,
Mr. and Mrs. Hadlock, Miss Ross Lewins.
The number of live pigs exported from the harbour of Wa-
terford in the course of fifteen months has been nearly 23,000.
At the Assizes for Derby. A cause came on before Sir
Robert Graham, and a Special Jury, which had excited con-
siderable interest in the neighbourhood of Derby. Miss Ann
Matchiff (sister to Mr. Matchiff, grocer at Derby), was plaintiff,
and Sir Willoughby Dixie, of Market Bosworth, Bart. was
defendant. The action was brought to recover compensation
in damages for a breach of a promise of marriage made some
years ago; when after a hearing which lasted about five hours
the Jury returned a verdict for the plaintiff with *Fifteen
Hundred Pounds* damages.—The verdict gave great satisfac-
tion to a very crowded Court.
At Ken county assizes, James Donald, an officer in the
navy, was indicted for forging and uttering a bill of exchange,
purporting to be drawn by Lieut. Porter, of his Majesty's
ship Tyrian, with intent to defraud the Commissioners of the
Navy.—The circumstances were clearly proved.—Guilty—
Death.
John Ashbee proprietor of a paper mill, near Canterbury,
was found guilty of forging and uttering the stamp used by
the directions of the Commissioners of Excise, to denote the
payment of duties on the paper.—Transportation for seven
years.
Mathew Connor, John Brown, and John Curby, were
indicted for stealing 28 bags of dollars from on board the
Coromandel Hoy, on the river Thames.—(The circumstances
of this atrocious robbery are too fresh in the recollection of
the public to require a minute detail.) the robbery was fully
proved, and the persons of the men identified—they were all
found guilty, and received sentence of death.

scopes has made us acquainted with these spots,
which probably existed since creation, but which
the ancients were totally ignorant of, and only be-
came known since the invention, which is little
more than two centuries ago, before which time
the spots in the Moon which were seen then, as at
this day, with the naked eye, might have given
equal rise to the imagination to account for them.
It is only from the Moon's appearance through a
telescope we are led to conclude that she is simi-
larly constructed to our earth; but what proof
have we, or can we ever have, of this divine inten-
tion of the Almighty but conjecture? Yet the dif-
ference between one luminary and the other is well
known; as the Sun is the centre of a system shin-
ing with its own light, and shedding its rays on all
created matter within the sphere of its attraction,
while the Moon derives her light from the Sun, and
transmits it by reflection to the earth, at the same
time encircling her as she advances periodically in
her lunations, in making her revolutions with her
round the Sun in the same period of time.
To speak of what substance the Sun or the Moon
is composed of beyond mere presumption, would
be folly. It is not for mortals to ascertain it—it
is sufficient for us, inhabitants of this globe, to be
sensible of their united benefits, by which the vi-
vifying principle of nature is sustained. When the
earth was created, the primary elements, heat and
light, were transmitted from the Sun, while that
of motion to the fluidity attached to her surface is
produced by the action of the Moon's influence—
reasoning on this data, it being admitted that changes
of weather are governed by the Moon, the first
principle of those changes must be on the atmos-
phere being first set in motion. The increased rise
of the tides are regular and periodical, at every new
and full Moon, but the winds are not subject to the
same impulses, changing from opposite directions,
or continuing in the same course for a considerable
time, as has been the case for the last six weeks,
ever since the total eclipse of the Moon, which fell
on the 9th June, midnight. To us it was a total
eclipse of the Moon, but to that planet a total
eclipse of the Sun, during which period the Moon
must have been enveloped in total darkness; the
action of her influence must have been greater on
the earth, and principally in the direction of the
South Atlantic Ocean, where the eclipse more par-
ticularly fell. The wind has ever since continued
in the southern quarter, sometimes inclining to the
east, but more generally to the west. The large
spots on the Sun, by withdrawing a certain portion
of its influence, may have contributed to increase
that of the Moon's, and thus it may go on diminish-
ing by degrees, until harmony is restored. In con-
templating this state of things, it may operate as an
admonition to us, Terrestrials, not to be too proud
of the great superiority we conceive to have over
the Lunarians, in considering their globe subser-
vient to the convenience and comfort of our supe-
rior world. Of the intentions of Providence no
one ought to scrutinise—the sum and solace of our
happiness in this life is to believe that chance has
no share in its direction.

EXPORTS.

Harmony, for London—100 brls. pork, Harvey & Co.—
100 do. butter, E Ryan & Sons—399 lbs. pork and beef, R.
& T. Westropp—30 do. beef, 34 brls. pork, J. Kelly & Co.
