 The Mayor said that for several years the electric lighting loan, principal and interest, had to be met, as well as the working expenses, actually before the undertaking was able to earn any money of itself. That left the Improvement Fund in an unhappy position, and they had asked the Gas Committee to come to its assistance, and he believed they would, because the gas works was as much the property of the citizens as the electric lighting works. He did not see why they should not work in harmony to make both a success. (Hear, hear.)

On the motion of Alderman McNeice, the minutes of the Conference were adopted.

A COMPARISON.

The Grecian Peasant, tending his Currant Vine, has far more need of patience than the British farm labourer. Here, we sow our corn either late in autumn or early spring, according to locality, and look for harvest in the following autumn. In Greece the currant-grower, having planted his grape-vine-yard, has to nourish the tender vines for six or seven years before they yield a harvest. This fact, taken in conjunction with that other—that the currant-vine does not flourish anywhere save in Greece, makes it amazing that so delicious and so nutritive a food as the dried currant should be so cheap.

The demand for Currants is far greater than ever before. Currant Bread is still widely popular, and general Currant Cookery has been much advanced by the publication of a most useful and sensible little book—"Currants: A Few Tasty Recipes." Your own grocer will gladly give you a free copy of this Booklet. Get it to-day.
