

Medical treatment, so long as acidity is present, can only temporarily relieve the symptoms; permanent benefit and complete relief can only be secured by neutralising the acid, thus giving Nature a chance to heal itself. Personally, I have secured remarkable results in even the severest cases by the use of the well-known antacid, bisurated magnesia, and I strongly advise anyone suffering from stomach trouble in any form to keep a little bisurated magnesia on hand, and take half a teaspoonful in a quarter of a glass of hot or cold water after each meal, or when the slightest distress is felt. It can be obtained from any chemist, gives immediate relief, and I have known it to cure chronic cases of many years' standing, as well as the most severe cases of acute gastritis."

to the guardians' letter of the 10th instant, regarding repairs to the Newmarket Dispensary, calling attention to the fact that in 1871, when this house was built as a dispensary to the Board of Guardians, the latter agreed to take it at 25 s. year, and fit it up as a dispensary at their own expense. Under the circumstances, though he understood the matter was only one of a few shillings, he regretted he was not able to do those repairs.

Mr. Hickie, R.O., said that the work could be done for a few pounds.

Mr. Malone said it was a matter for the members of the division.

Mr. Heagarty said he did not see what shutters were required for at all.

Mr. Hickie said that during the elections a pane of glass was broken.

Mr. Halpin said that a weather board and a pane of glass should be sufficient. He thought the dispensary was good enough, and that a few shillings should do all the repairs necessary.

In reply to a question, the Clerk said they had the dispensary for 41 years.

Mr. McNamara said that the landlord kept the dispensary in his district in repair.

It was decided to again call on the landlord to get the work done.

TO MAKE A GOOD HAIR DESTROYER.

Ladies who are annoyed and humiliated by a growth of superfluous hair will be interested to learn that a safe, satisfactory and inexpensive preparation, which may be depended on to permanently destroy any undesirable hair growth, can be made by mixing 1½ drams pulverised sulphine concentrate with 2½ drams zinc oxide and one dram of powdered orris root. Any chemist can supply these ingredients, and do the mixing for you. To use, mix a little of the powder into a paste on a plate by adding a few drops of water; apply to the hair with the blade of a knife, and remove at the end of two minutes with the back of the blade, then apply a good non-greasy cream, or, if you prefer, a lotion consisting of 2 ounces rose water, 2 ounces Flowers of Oxidion, and one dram tincture of benzoin. Repeat this process every three or four days until the roots themselves are completely destroyed. Although so simple and so inexpensive, this preparation for the removal of hair is undoubtedly more effective than those articles for which high prices are asked, and you have the added advantage of knowing exactly what you are using.

THE NECESSITY FOR MANURING.

Many farmers who have the good fortune to cultivate good land, think that it is quite absurd to apply artificial manures. Again, others who have poor land conclude that it would be wasteful to apply manures to land that is so poor, as they believe it would not pay. Both standpoints are untenable and erroneous. As well might a farmer think that by opening an account at a bank with one initial payment he might continue to draw cheques indefinitely. Sooner or later the original capital will become exhausted, and the bank will refuse to honour the cheques. This is exactly
