# ROBBERY

Sensational Morning Hold Up A startling story was surrent in the city this morning to the effect that is the early hours the pay clerk of Mesers J N Russell and Sons, whose offices are in Henry street, was held up by masked and armed men, who deprived him of a sum of money, variably es:1mased as from \$100 to \$150. It is understood that the money was being conveyed from the office at a little before 6 am for the purpose of paying the wages of the night working staff when the incident occurred, and the robbers desamped with the proceeds of their coup.

### PUBLICATIONS EXCELLENT

By a Limerick Teacher

The volumes books that are now being pro duced by Mr Michael B O'Donnell, MIH. FRHS. FOI, of Newcastle West, and pub lished by the Educational Company of Ireland. are receiving a very favourable reception from the teachers of the Primary, Secondary and Technical Schools of Ireland. The subjects dealt with include General Experimental Solenes, Hygiene, Temperance, Plant Life. Nature Study, and Gardening-subjects that are closely silled with the social and industrial welfare of the country. Review of Parts I and 2 of those books appears in the official journal of the Teachers' Organization and of the Association of Secondary Teachers. Extracts from com potent solence beachers are also published. All speak in the kighest terms of the excellence of the publications. The books are arranged to from 344 7d to 30, 34, and in Cork from 38; 4d meet the needs of Nature Study. IMMUNE POTATOES

What are immone potators ! The question s ofsen asked, and the answer is of se moot interest to the town dwaller with his plot of pasch of a souple of percharof to charge as i Is to the largest former. Potasura are said to ba lumuna when shey araknown or be rests tens so or not asymble of being affected by disease which is known in Ireland as black soub, but which in Great Brisain celled ware disease. Si far as Iroiano is concerned, black seab is a comparative aids ci, reger age that are in this wen country was notified about 10 years ago when it was discovered in a garden at K. izeni, Oc

In an effort to suppress the disease and preroad lie extension to other puts of the court the Department of Agriculture secured preses sion of the land on which the drap reporded ourbreak occurred and took etaps to somete anar no potitio a would be grown thereon () soveral years. It is evident, however, that this discare must have existed at other places than hat from which is was first reported, for it was subsequently discovered as other esurres to the lamentate Leighbourhood, and to a very short blue she whole of the important polary grow. I g district lying between the South-eastern slope of the Mourns Monasting and the ser was found to be invoved. This area was promptly scheduled as lefested out the outvariou if pointous was probabled on all field la which she dicesas was a scovered. It wo hoped shas by keeping the land free from possence in this way for some yours the disons would die out and the land become cleanes: of the infection. Unfortunetely, however, this proved not to be she case, and as showing how very difficult in is so pradicate the disease, i may be mentioned that after having been in graes for seven years the land on which the original enthreak occurred (this land to sail in the occupation of the Department) was found sammi-non a to bess againg entreet of a non-immune vacioty of positious planted thereon.

In time it was de-covered that while certain varieries of guarous are very assessable to the disease. There are oppore that are espable of resisting the attack, and can thus be grown successfully on lafeoted land. At present ave immune, and are recommended by the Departmens for plansless. These Include Ole Ob amplum, Greek Soot, Lacher, Avian Violate M Jestie, Karr. P.ak, Tiaward Perfection Stamto k letal Green, and of cour varieties Burnet H as and Arran Comvade. The following popular varioties are, unfortunately, vet encountrie to the disease, v's Up to Date, Arran Chief. Blook binnesy, Billian Queen

Minesyind, and Duze of York.

When the clarate spectra in a district le usually dire found in gardens, whence spreads to field crops. In shelr own inserest and for the protes ton of the farmers of the entrounding dist. let, all spendouse in sown and villages who grow possion should rea that their gardens and allosments are planted wich one or other of the immune varieties. The appearance of disease necessionees the schedu. ing and inspection of all gerdons as well as of all fields to any district in which the disease scours, and leads to restrictions lu marace ing, and in she cals of eachs So far the disease has been outlined to South On Dowe and North Co Louth, but more veccus, y is has made the appearance in the Newry district Though it is constacy to the regulations for latected potatoes to to ount to any other part of Ireland, there is grave danger that infection may spread, and persons having gardens and allotmonts in olice or sowns, as well as farmers, should, accordingly, take precentions against the introduction of disease through using seed grown in an infected sies. Ware or table possesses coming from enc's areas, are liable to carry the intection, and fur this reason it is sesonial that every possible oars should be taken to gasrd ag last the introducsion of the disease through this source. In particular, the postings of polisions of any variation grown to Congress Down or Louth should be burne, and act pus into the refuse heap and used as manure or sep messing. It is aven possible to introduce she diemen abrough the soil aspaoled to polistose a ming from a facted areas, and on this account farmers gotting a change of sced from the North or from Sectiond or Rugiand causes ba too osrafal.

The best preventive of the disease, however, is so see that some but immune varieties are living, as there are only my brother, Edward planted in gardens and allosments. Farmers should procure some seed of suitable immune varieties for 1933 so as to brooms acqua used wish the ecopping qualities of immunes, hace being the only variables that in the near future will be wanted.

TO THE EDITOR OF THE LIMERICE LEADER SIR-Soon after the outbreak of war the Department of Agriculture made an order prohibiting the manghane of in-east betters. Later this order was amended to prevous the export of in-east helfers and springers.

Naturally these orders were disliked by those having these cathle for sale, but oney had the mants of keeping our dairy hards as full already, and any time farmers wanted in-east halfers they had them an har a hard in-east

helfers they had them so buy at reasonable R cently these orders have been withdrawn, with the result that in-oald beifers are being slaughtered in every vown and village and many are shipped to Great Busain, probably for slaughter also.

Now another avenue for the export of incalf ostile is opened. Owing to the terrible wastege and sleugher of salls in European soun-ries during the war and to the ravages of foot and mouth disease, which, in Beigium alone, stracked 238,882 boasts last year, the shortage jor dally cattle is very neute in France and Belgiam. So great to this shortage that France, which exported 18,400 sone of batter to England to the year previous to the war, if a beavy importer of buster this year.

We are informed sans shipping of in-call halfers to France and Belgium will commence from middle of January onwards, so that dairy farmers at home should purchase shelr require. ments at cuce. If they postpone buying bill spring they may have a difficulty in obtaining what they want, even at much bigher prices. -Xoure faithfully. Bally hosan, 6: December, 1981.
